ORIENT LUMBER AND TRIM FOR BEST APPEARANCE

Framing lumber is graded for structural strength and not appearance. Exterior trim is graded for one good side.

Always install the material leaving the best edge and best surface visible. Please remember that these blemishes in no way negatively affect the strength or integrity of our product. (See Fig. A, B, C.)

FLOOR LEVELING OPTIONS

There are multiple ways to level your floor frame. Our recommended leveling method is shown below.
Leveling materials are not included in this kit.

PREFERRED METHOD - 4x4 TREATED RUNNERS

MATERIAL REQUIRED

- x2** 4 x 4 x 10' (10,2 x 10,2 x 304,8 cm) Treated Lumber (Cut to (3) 48" runners.)
- Fasteners for Frame to 4"x 4".**
 (3" Screws shown as one option.) Minimum (40) 3" screws / exterior grade.
-  **Use only wood treated for ground contact and fasteners approved for use with treated wood.**
-  **Always support frame seams.**

LEVELING METHODS

- Level under 4x4 runners only.
- Locate leveling material 12" from ends of runners and no more than 48" apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

LEVELING MATERIALS

- Gravel
- Solid Masonry Blocks in 1", 2", 4" or 8" thickness
- 2x4 Treated Lumber
- Asphalt Shingles

 **Leveling higher than 16" not recommended.**

CONCRETE

- If you are building your shed on a concrete foundation see the following page.

CONCRETE FOUNDATION

If you choose to install your kit on a concrete slab refer to the diagram below.

Building Size	Actual Floor Size	A	B	C
4'x10' (121,9 x 304,8 cm)	4'x10' (121,9 x 304,8 cm)	120" (304,8 cm)	48" (121,9 cm)	41" (104,1 cm)

Requires:

- x2** 2 x 4 x 10' (5,1 x 10,2 x 304,8 cm) **MUST be treated lumber.**
- x1** 2 x 4 x 8' (5,1 x 10,2 x 243,8 cm) **MUST be treated lumber.**
- x1** **Caulk**

Allow new concrete slabs to cure for at least seven (7) days.

- A treated 2 x 4" (5,1 x 10,2 cm) sill plate is required when installing your shed on concrete.
Hint: Use treated lumber in your kit or purchase full length treated lumber.
- Use a high quality exterior grade caulk beneath all sill plates.
- Fasten 2 x 4" (5,1 x 10,2 cm) sill plates to slab using approved concrete anchors (**fasteners not included**).
- Check local code for concrete foundation requirements.

FLOOR FRAME

PARTS REQUIRED:

x2 TREATED 2 x 4 x 24" (5 x 10 x 61 cm)

x10 TREATED 2 x 4 x 45" (5 x 10 x 114,3 cm)

x2 TREATED 2 x 4 x 96" (5 x 10,2 x 243,8 cm)

✓ BEGIN

- 1 Arrange parts on edge on a flat surface. Measure and mark dimensions from end of boards. Secure parts with (2) 3" nails at each mark and (4) 3" nails at seams.

HINT:
For easier nailing
stand on frame.

Your floor frame is now assembled.

NOTE: The included floor is designed for general use. Depending on your specific use you may want to construct a heavy duty floor frame by adding additional floor joists (see page 3 for optional materials).

FLOOR FRAME

STOP!

LEVEL AND SQUARE FLOOR FRAME

Before installing the floor decking, it is important to level and square the floor frame. A level and square floor frame is required to correctly construct your shed.

STOP!

✓ BEGIN

- 1 See page 9 for the preferred floor leveling method.
- 2 Use level and check the frame is level before installing floor panels.
- 3 Check for frame squareness by measuring diagonally across corners. If the measurements are the same, the frame is square. The diagonal measurement will be approximately 129-1/4" (328,3 cm).
- 4 When the frame is level and square secure one side of frame to the 4x4 runners using one fastener at ends of each runner. At the opposite end of the frame, secure the frame to 4x4 runners with one fastener at the end of each runner making sure the frame remains square (**Fig. A**).

Once the floor frame is level and square, fasten the frame at each point where the frame contacts the 4x4 runners.

FLOOR PANELS

PARTS REQUIRED:

 **Ensure your floor frame is square by installing panel and squaring frame.**

✓ BEGIN

- 1** Install the **48" x 96"** pro-struct panel with the 48" edge and corner flush to the floor frame (**Fig A**). Secure panel with (2) 2" nails in the corners. **Ensure that the 48" edge will be 3/4" on the floor joist.**
- 2** Move to the opposite end. Using the long edge of the panel as a lever, move the panel side-to-side until the 96" edges are flush to the floor frame (**Fig. B**). **Ensure that the 48" edge will be 3/4" on the floor joist.** Secure panel with (2) 2" nails in the corners.

Fig. A

 3/4" on edge.

- 3** Install the **48" x 23-7/8"** pro-struct panel, flush along edges and flush to the installed panel. Secure with (1) 2" nail in each corner.

- 4** Continue securing the panels with 2" nails spaced 6" apart on edges and 12" apart inside panels.

Your floor panels are now installed.

! IMPORTANT!

Check that the floor frame is level after installing floor panels.
Re-level if needed.

• The floor may be used as a stable work surface for wall construction.

HINT: • Organize your assembly procedure during the build process to avoid over-handling of the walls.

DOOR HEADER

STOP!

Assemble this door header before building any walls!

STOP!

PARTS REQUIRED:

x1  7/16" x 3-1/4" x 33-5/8" (1,1 x 8,3 x 85,4 cm) OSB

x2  **BZM** 2 x 4 x 33-5/8" (5,1 x 10,2 x 85,4 cm)

✓ BEGIN

- 1 Place (1) **BZM** and **OSB** end-to-end on flat surface, flush in middle.
Center **OSB** on top of **BZM**.

Fasten together with 3" nails in the pattern shown.

- 2 Flip header assembly over and nail on the other side, as shown.

Your door header is now assembled.

WALL PANEL INSTALLATION HINTS & EXAMPLES

PARTS REQUIRED:

 **Ensure your wall is square by installing one panel and squaring frame.**

Install all wall panels with the primed side facing up.

✓ **BEGIN**

- 1** Place a 48" x 76" panel on the wall frame, as shown.
Locate the panel flush to the top plate.

HINT: Use a 3/4" piece of wood as a measuring guide to mark the 3/4" measurement on the wall stud.

Secure panel with (2) 2" nails in the corners (**Fig. A**).

- 2** Move to the opposite end. Using the long edge of the panel as a lever, move the panel side-to-side until you have a 3/4" measurement on the wall stud.

Secure corner with (2) 2" nails (**Fig. B**).

Secure panel with 2" nails spaced 6" apart on edges and 12" apart inside panel.

For squareness maintain 3/4" and 1-1/2" measurement along panel edge.

HINT

Angle nail to draw panels tight at seams.

REQUIREMENTS

Storage Buildings

To validate your warranty, it is necessary to properly maintain your Backyard Storage Solutions, LLC unit; shingle the roof and paint or solid-colored stain the siding using quality, 100% acrylic latex exterior product with a minimum of two (2) coats within thirty (30) days of assembly; caulk above all doors and all horizontal and vertical trim boards; paint and seal all exposed edges, sides and faces of siding/trim and OSB siding to include all exterior walls and all sides and all edges of doors.

Gazebos & Pergolas

To validate your warranty, it is necessary to properly maintain your Backyard Storage Solutions, LLC unit. This includes treating all of the exposed cedar and pine surfaces on your gazebo or pergola structure with an exterior grade wood preservative, an exterior oil-based semi-transparent stain, an acrylic latex exterior paint or an acrylic latex solid color exterior stain within 30 days of assembly and as needed thereafter to maintain your warranty.
